

EPOXY POWDER COATING | COLOUR CHART

All our Roller Shutters parts such as slats, side guide rails, bottom T-bars, head-plates and chain wheels are hot dip galvanised as standard or can be finished with a baked Epoxy Powder Coat. We have a total of 20 standard colours available. Non-standard colours are available at a premium. **HOT DIP GALVANISING:** Xpanda Security continues to offer a full hot-dip galvanized option on a wide range of products, from burglar guards through to industrial roller shutter doors. Hot-dip galvanizing is still the preferred method of rust prevention when dealing with custom-made products designed for an outdoor application. Xpanda Security has all our hot-dip galvanized products dipped according to SABS 1461 specifications and hence we can guarantee the durability of our products in accordance with specifications laid down by the Hot-Dip Galvanizers Association of Southern Africa. Xpanda offers up to a 10 Year guarantee against rust, based on the limitations, as per the atmospheric map on www.hdgasa.org.za, which can be found on their FAQ tab on their website www.xpanda.co.za. Xpanda endeavours to have our products dipped to the following thickness of zinc coating. [1. TUBE 45-64 MICRONS 2. SOLID STEEL - 70 MICRONS]. Further information can be found on the above website or from Xpanda direct..
