

# RESIDENTIAL GARAGE DOORS | WOODEN

**W**ood has a timeless appeal. Natural, sturdy and solid, it integrates perfectly with every architectural design while blending beautifully with all its surroundings. Enhance the beauty of your home with a solid timber garage door carefully constructed from selected **Meranti** or **Red Grandis (Saligna) Hardwood** in either the elegant raised and fielded panel design or the more contemporary horizontal slatted design. We also offer a range of custom design timber doors.

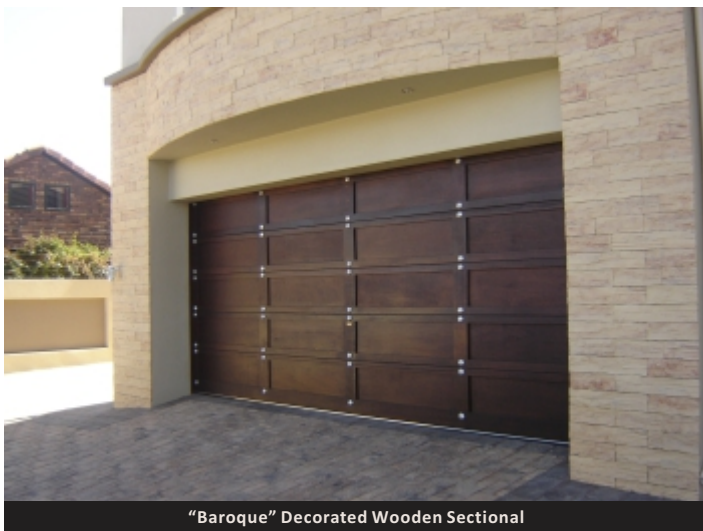

**S**ectional doors have proven to be the most conventional type of garage doors as they ingeniously slide up and back into the garage in easy moving sections lying parallel under the ceiling when open. These doors provide the most effective means of securing your garage ensuring maximum opening clearance and ease of operation.

## RED GRANDIS HARDWOOD *a natural, sustainable resource!*

**R**ed Grandis is a hardwood with very strong and durable characteristics and is naturally of a light and even colour.

Our Red Grandis wood is sourced from sustainable plantations in South Africa which subscribe to the World's Conservation Strategy.

As an end purchaser, you are therefore not contributing to the destruction of the world's natural forests.

A factory coated oil is applied to the wood before leaving factory and is available in 3 colours. **Wood will need to be sealed (D-I-Y) with Timbicare Exterior Sealer within 3 weeks of installation.**
